

To Import a GEDcom in MacFamilyTree

1. On the start screen click to "**Import a GEDcom file....**"
2. Locate the file on your computer.
3. Click **Open** and give it a name. Click **Import**.
4. Select the folder that contains the associated media.
5. In the **dropdown**, specify which type of character encoding to use
 - In most cases UTF-8 for names, Western (ASCII) for media.
6. Click **import**.
7. A list of unparsed files will be listed.
8. **Save a file** of them to be added in later.
9. Click **Done** and the database opens in MacFamilyTree.
10. Directions to import files from Family Tree Maker, Ancestry.com, FamilySearch and other genealogy programs are in the User's Guide.
